FOR UK SMALL BUSINESSES

THE 5-MINUTE BACKUP CHECK

If your laptop died tomorrow, could you get everything back?

Five plain-English checks you can do yourself today. No technical knowledge needed.

Most business owners *think* their backups work. Very few have ever tried getting a file back. Work through these five questions and tick the ones you can honestly answer “yes” to.

1 Do you know where your important stuff lives?

Think customer lists, invoices, accounts, contracts, photos and emails. If it's spread across a laptop, a phone and a USB stick in a drawer, it's easy to miss something.

- [ ] I could list where all my important files are kept

2 Is there a copy somewhere other than your computer?

A backup on the same laptop isn't a backup. Keep at least one copy somewhere else, such as a cloud service or an external drive kept away from the office.

- [ ] My files are copied to at least one other place

3 Does it happen automatically?

If you have to remember to do it, it won't happen on the busy weeks. Check your backup runs by itself, and look at when it last ran.

- [ ] My backup runs on its own, and I know when it last worked

4 Have you ever tried getting a file back?

This is the one most people skip. Make a copy of any file, delete the copy, then try to get it back from your backup. If you can't, or you're not sure how, you've found the gap before it costs you.

- [ ] I've restored a file from my backup in the last 3 months

5 Would your backup survive a scam or virus?

Some attacks lock every file they can reach, including backups that are always connected. Keep one copy that isn't permanently plugged in, or use a cloud service that keeps older versions of your files.

- [ ] At least one copy can't be reached if my computer is attacked

How did you score?

5 ticks

You're in great shape. Put a reminder in your diary to test a restore every few months.

3–4 ticks

You're most of the way there. Fix the gaps this week while it's fresh in your mind.

0–2 ticks

A lost laptop or a scam email could cost you days of work. It's worth getting help.

> **The simple rule to remember:** keep three copies of anything important, on two different types of storage, with one kept somewhere away from your office.

Your five-minute action list

- **Today:** restore one file from your backup. It's the quickest way to find out if it really works.
- **This week:** make sure everything important is copied somewhere other than your computer.
- **Every few months:** test a restore again, and check your backup is still running.

Not sure? Let us check it for you. £99

Our Cyber Health Check looks at your backups and the other everyday weak spots that catch small businesses out. You get a clear, plain-English report showing what to fix first.
